

Forklift Rubber Caster with Nylon Core

This forklift caster features a rubber tread and a nylon core. It is designed for smooth, quiet operation and excellent load-bearing.

Product Overview

Industrial-Grade Performance

This forklift caster is engineered with a high-quality rubber tread bonded to a robust nylon core, ensuring both durability and smooth operation. Designed for demanding industrial environments and warehouses, it provides excellent load-bearing capacity and resistance to wear and tear. The inclusion of precision ball bearings facilitates effortless rolling, making it a reliable solution for material handling applications.

Technical Specifications

Key Features

- Precision ball bearing for smooth rolling
- High load-bearing capacity
- Wear-resistant construction
- Quiet operation

Materials

Rubber Tread, Nylon Core

Application

Best For

Warehouses • Material Handling • Industrial Environments
