

Formed Sheet Metal Components

These are precision-formed sheet metal components for industrial applications. The parts come in various shapes such as curved panels, strips and formed sections.

Product Overview

Precision Formed Sheet Metal Components

These versatile formed sheet metal components are designed for high-performance applications in machinery and automotive assemblies. Featuring a range of geometries including curved panels and structural strips, these parts offer robust construction and precise dimensions. They are ideal for projects requiring durable, specialized metal integration in industrial environments.

General Specifications

Finish

Green Coating • Grey Coating

Available Geometries

- Curved Panels
- Formed Sections
- Straight Strips

Application Details

Target Industries

Automotive, Machinery Manufacturing
