

Four-Cylinder Automotive Engine

This four-cylinder engine is designed for automotive applications. It delivers excellent power and fuel efficiency with its multi-port fuel injection system and lightweight aluminum alloy cylinder head and block.

Overview

High-Performance Four-Cylinder Engine

The DA468QA is a high-performance four-cylinder engine engineered for versatile automotive applications. Featuring a lightweight aluminum alloy cylinder head and block, this unit balances power output with fuel efficiency. It includes essential components like intake and exhaust manifolds, an alternator, and a starter motor, designed for simplified installation and reliable long-term maintenance.

Technical Specifications

Engine Configuration	4-Cylinder
Fuel System	Multi-port fuel injection
Valvetrain	Overhead camshafts

Construction

Material Construction	Aluminum Alloy Cylinder Head, Aluminum Alloy Block
-----------------------	--

Included Components

Included Components

- Intake Manifold
- Exhaust Manifold
- Alternator
- Starter Motor
- Sensors
- Wiring Harnesses

Maintenance

Serviceability

Easy Installation • Low Maintenance
