

Four-Cylinder Diesel Engine for Industrial Use

This robust diesel engine is engineered for diverse industrial applications. It features a four-cylinder configuration, direct fuel injection, and a mechanical governor for reliable performance and fuel efficiency.

Overview

Industrial-Grade Reliability

The YND485G is a high-performance, four-cylinder diesel engine engineered for rigorous industrial demands. It utilizes direct fuel injection and a mechanical governor to ensure optimal fuel efficiency and consistent power delivery. Designed for versatility, this engine is an ideal power source for generators, construction equipment, and agricultural machinery.

Technical Specifications

Cylinder Configuration	4
Fuel Delivery	Direct fuel injection
Governor Type	Mechanical

Key Components

Core Components

- High-pressure fuel pump
- Fuel filters
- Oil filter
- Efficient cooling system

Applications

Suitable Applications	Generators, Construction Equipment, Agricultural Machinery
-----------------------	------------------------------------------------------------
