

Four-Cylinder Diesel Engine for Power Generation

This robust diesel engine is designed for power generation and various industrial applications. It features a four-cylinder configuration, direct injection system, and durable construction for long service life.

Overview

Robust Power Generation Solution

The R4105G58 is a high-performance, four-cylinder diesel engine engineered specifically for power generation and industrial applications. Designed for reliability and fuel efficiency, it provides a dependable power source for demanding environments. Its durable construction ensures a long service life and reduced maintenance, making it an ideal choice for continuous operation requirements.

Technical Specifications

Engine Configuration	Four-cylinder diesel engine
Displacement	4.1 L

Performance Metrics

Performance Output

4.1 L Engine Displacement	4 cyl Cylinder Count
-------------------------------------	--------------------------------

Features

Key Features

- Direct injection system for enhanced combustion
- Optimized for continuous operation
- Reduced emissions
- Durable construction

Compliance

Emission Standards	Stringent Emission Compliant
--------------------	------------------------------
