

Four-Cylinder Water-Cooled Diesel Engine

This four-cylinder, water-cooled diesel engine is engineered for power generation and various industrial uses. It incorporates a direct injection fuel system and a mechanical governor for consistent operation under different loads.

Overview

Industrial Power Solution

The CZ4102 is a versatile four-cylinder, water-cooled diesel engine specifically engineered for demanding power generation and industrial applications. Designed for maximum durability and reliability, it features a robust construction that ensures consistent performance in challenging environments. The unit incorporates a direct injection fuel system for efficient combustion and a mechanical governor to maintain stable operation under varying load conditions.

Technical Specifications

Engine Configuration	Four-cylinder, water-cooled
Fuel System	Direct injection
Governor Type	Mechanical

Key Features

Integrated Components

- Fuel filter
- Oil filter
- Water pump

Design Highlights	Water-cooled, Direct Injection, Industrial Grade, Easy Maintenance
-------------------	--

Installation

Mounting	Sturdy frame for easy installation
----------	------------------------------------
