

Four-Cylinder Water-Cooled Diesel Engine

The four-cylinder, water-cooled diesel engine is designed for various industrial applications. It features direct fuel injection, ensuring efficient combustion and reduced emissions.

Overview

Industrial Performance

The R4105ZD1 is a high-performance four-cylinder, water-cooled diesel engine specifically engineered for diverse industrial applications. Featuring advanced direct fuel injection, it ensures highly efficient combustion while maintaining reduced emission levels. Its robust cooling architecture and compact, high power-to-weight design make it an ideal power solution for generators, heavy construction machinery, and agricultural vehicles.

Technical Specifications

Cooling System	Water-cooled
Number of Cylinders	4
Fuel Injection	Direct Injection

Application Suitability

Suitable Applications

- Power Generators
- Construction Machinery
- Agricultural Vehicles

Performance Features

Key Features	High Power-to-Weight Ratio, Compact Design, Reduced Emissions, Heavy-Duty Cooling
