

Four-Cylinder Water-Cooled Diesel Engine

This four-cylinder, water-cooled engine features a direct injection system for efficient combustion and fuel economy. It is engineered for durability and long service life, with a focus on ease of maintenance and serviceability.

Overview

Industrial Power Solutions

The ZH4102K1ZB series is a robust, four-cylinder, water-cooled diesel engine engineered for high performance in demanding environments. Featuring a direct injection system for optimal fuel economy and efficient combustion, this engine is built for long-term durability and simplified maintenance. It delivers consistent power output across various heavy-duty applications, including generators, construction equipment, and agricultural machinery.

Technical Specifications

Cooling System	Water-cooled
Engine Configuration	4-cylinder
Fuel System	Direct Injection

Features

Engine Highlights

- High-pressure fuel pump
- Advanced water-cooling system
- Sturdy engine block construction
- Emission standard compliant

Applications

Suitable Applications	Power Generation, Construction Machinery, Agricultural Equipment, Heavy-duty Industrial
