

Four-Jaw Wedge-Type Lathe Chuck

This is a precision four-jaw wedge-type lathe chuck designed for secure and accurate workpiece holding. It features a robust construction for demanding machining operations.

Product Overview

Precision Four-Jaw Wedge-Type Lathe Chuck

This precision four-jaw wedge-type lathe chuck is engineered for secure and accurate workpiece holding during demanding machining operations. Built with robust construction, it ensures stability and reliability for high-performance metalworking tasks. Its wedge-type design provides superior gripping force, making it an ideal choice for professional machining environments.

Technical Specifications

Construction

Robust Design • High-Durability

Chuck Type

Four-Jaw Wedge-Type

Application Suitability

Metalworking, Precision Machining, Industrial Lathe Operations
