

Four-Stroke Diesel Engine with Radiator

This four-stroke diesel engine is equipped with a radiator, air filter, and fuel injection system. It is mounted on a sturdy frame and includes a multi-groove pulley for power transmission.

Product Overview

Industrial Four-Stroke Diesel Power

This robust four-stroke diesel engine is engineered for demanding industrial applications requiring consistent and reliable power output. Featuring an integrated radiator cooling system, advanced fuel injection, and a sturdy frame mount, it is built to perform in challenging environments. The inclusion of a multi-groove pulley system ensures efficient power transmission for various machinery and equipment setups.

Technical Specifications

Engine Cycle	Four-stroke
Cooling System	Integrated Radiator
Fuel Type	Diesel

Key Features

Application Suitability

Industrial Use • Heavy Duty

Key Components

Air Filter, Fuel Injection System, Multi-groove Pulley, Sturdy Mounting Frame, Integrated Gauges
