

Freight Vehicle Aluminum Seat Assembly

This aluminum seat assembly is designed for freight vehicle applications. It helps address cold start problems in diesel engines and ensures long motor service life.

Product Overview

Freight Vehicle Aluminum Seat Assembly

This aluminum seat assembly is a specialized component engineered for heavy-duty freight vehicle applications. Featuring a robust silver-finished aluminum housing and a secure bolt-down design, it is built to withstand demanding operational environments. The unit includes integrated threaded ports and electrical connectivity, ensuring seamless integration into existing vehicle systems.

Technical Specifications

Material Construction	Aluminum housing with black top component
Mounting Configuration	Square flange with pre-drilled mounting holes
Connectivity	Electrical connector, Threaded ports

Application Compatibility

Compatible Systems

Freight Vehicles • Diesel Fuel Systems • Heating Systems

Product Identification

Model Number	KS139A
