

Friction Clutch Facing

Friction clutch facings are used in automotive transmission systems. These plates can be used for trucks, cars, trailers, trains, and marine vehicles.

Product Overview

High-Performance Friction Solutions

This friction clutch facing is engineered to provide reliable torque transmission and motion control across demanding industrial and automotive environments. Designed for versatility, these components are suitable for a wide range of heavy-duty machinery and vehicles, including trucks, trailers, tractors, trains, and marine vessels. Our friction material technology ensures consistent performance and durability for essential transmission systems.

Applications

Compatible Vehicles & Machinery

Truck, Car, Trailer, Train, Marine, Tractor

Product Range

Available Friction Components

- Friction plate
- Transmission plate
- Marine plate
- Paper material friction components
