

# Friction Discs

These friction discs are designed for braking and power transmission applications. The discs have a robust construction with abrasive materials bonded to a metallic core, providing high friction and wear resistance.

## Product Overview

### High-Performance Friction Discs

These friction discs are engineered for demanding braking and power transmission applications in heavy-duty machinery. Featuring a robust construction with specialized abrasive materials bonded to a metallic core, they deliver superior wear resistance and consistent performance. Available in multiple configurations, including internally and externally toothed designs, these discs are built to withstand rigorous operating conditions.

## Technical Specifications

|                          |  |
|--------------------------|--|
| Construction             | Metallic core with bonded abrasive materials |
| Available Configurations | Internally Toothed, Externally Toothed       |

## Performance Features
