

Front-End Loader

This is a front-end loader, a type of heavy construction machinery. It is used for loading materials such as soil, rocks, sand, demolition debris, etc.

Overview

Heavy-Duty Front-End Loader

This ZL20D front-end loader is engineered for demanding construction and industrial environments, providing reliable material handling capabilities. Designed for versatility, it excels at loading soil, rocks, sand, and demolition debris into dump trucks, hoppers, or rail cars. With its heavy-duty tires and robust bucket design, this machine offers the durability required for rough terrain and intensive daily operations.
