

FTA DVB-S Receiver

This digital video receiver is compatible with DVB-S standards for free-to-air satellite TV. It supports various video formats and offers features such as digital noise reduction and enhanced color correction.

Product Overview

Professional FTA Receiver

The DVS-0801 is a versatile Free-to-Air (FTA) digital video receiver designed to deliver reliable standard definition performance. Featuring dual decoders and a robust metal housing, this unit allows users to watch one channel while simultaneously recording to an external VCR. Its compact 266mm design and support for software upgrades ensure it remains a practical solution for standard definition broadcasting needs.
