

Fuel Dispensing Components

These are a selection of components for fuel dispensing. The components include flow meters, pumps, pulse generators, counters, motors, and boards.

Overview

Industrial Fuel Dispensing Solutions

This comprehensive suite of fuel dispensing components is engineered for high-performance and reliable operation in industrial environments. The collection includes essential hardware for fluid measurement, pumping, and electronic control systems, ensuring precise fuel management. Designed for durability and compatibility, these components are suitable for integrating into robust fuel dispensing infrastructure.

Pumping Systems

Available Pump Models

- TYPE-75 Vane Pump
- RXGP60 Gear Pump

Flow Measurement

Flow Meter Models

- RXM500A (Low Cover)
- RXM500 (High Cover)

Electronic Control

Electronic Components

Tax Control Board, Display Board, Power Supply Board, I/O Board, Graphic LCD, Human-Machine Interface Board

Pulse Generation

Pulse Generator Models

- RXP-01
- RXP-02

Power & Mechanics

Motor Voltage

380 V

High-Power Motor Voltage

Mechanical Accessories

Mechanical Counter
