

Fuel Injection Pump 1.2L 30kW

This fuel injection pump has a 1.2L displacement per cylinder and a 30kW output. It is designed for multi-cylinder diesel engines, providing reliable fuel delivery.

ADDITIONAL IMAGES

Overview

High-Performance Diesel Fuel Injection

This robust A-type fuel injection pump is engineered for heavy-duty applications, specifically optimized for excavator performance. It ensures efficient fuel delivery and precise atomization to maintain peak engine output while minimizing downtime. Designed for durability, this pump provides a reliable solution for demanding industrial environments requiring consistent high-pressure fuel injection.

Performance Metrics

Key Performance Data

1.2 L/cylinder
Max Displacement

30 kW/cylinder
Max Output Power

Technical Specifications

Pump Type	Multi-cylinder high-pressure fuel injection pump
Maximum Displacement	1.2 L/cylinder
Maximum Output Power	30 kW/cylinder
Housing Material	Robust metal housing

Features & Benefits

Key Features

- Optimized fuel atomization
- Extended service life
- Precision-engineered components
- Easy installation
- Consistent high-pressure output

Applications

Compatible Equipment

Excavators • Heavy-Duty Machinery • Industrial Diesel Engines • Automotive Applications
