

Fuel Injection System Oil Control Valve

This oil control valve is a precision-engineered component for fuel injection systems. It regulates oil flow to ensure optimal performance and efficiency.

Product Overview

Precision Oil Control Valve

This C-9 oil control valve is a precision-engineered component specifically designed for fuel injection systems. It efficiently regulates oil flow to ensure optimal performance and operational reliability. Constructed from high-grade stainless steel, the valve offers exceptional durability and superior resistance to corrosion in demanding environments.

Technical Specifications

Design Features

- Multiple ports for precise oil distribution
- Internal channels for flow regulation
- Star-patterned screw assembly

Material

High-grade stainless steel

Certifications

Industry Markings

NSF • ISR • JAF • WSF

Quality Certifications

ISO9001, Supplier Audit, BUREAU VERITAS
