

Fuel Injection System Plunger

Precision-engineered for high-performance fuel injection systems. Manufactured from hardened steel, the plunger features a finely lapped or ground surface for optimal sealing and smooth operation.

Product Overview

High-Precision Fuel Injection Plunger

This fuel injection system plunger is precision-engineered for high-performance common rail diesel engines. Manufactured from hardened steel, it offers exceptional durability, wear resistance, and a finely lapped surface finish for optimal sealing. Its optimized geometry ensures precise fuel metering and consistent performance under varying operating conditions, contributing to a reliable and extended service life for your fuel injection system.

Technical Specifications

Key Features

- Finely lapped surface for optimal sealing
- Optimized geometry for efficient fuel delivery
- High wear resistance
- Precision metering

Material	Hardened Steel
Compatible Systems	Common Rail, Diesel Engines
