

Fuel Tank Level Sensor

This fuel tank level sensor monitors the amount of fuel inside the fuel tank. It is designed for installation on a fuel tank and provides essential information for the vehicle's fuel management system.

Overview

Precision Fuel Monitoring

This fuel tank level sensor is engineered for reliable and accurate fuel monitoring in vehicle fuel systems. Constructed from durable, machined aluminum, it ensures longevity and consistent performance in demanding environments. Designed for straightforward installation, this unit integrates seamlessly into existing fuel management architectures to provide critical data.

Technical Specifications

Installation Components

- Phillips head screws
- Washers
- Insulated wiring

Material	Machined Aluminum
Mounting Method	5-screw flange mount
Electrical Connections	2 terminals

Key Features

Application	Vehicle Fuel Systems, Fuel Management, Level Monitoring
-------------	---
