

# Fuel Transfer Pump for Industrial and Automotive Applications

This positive displacement fuel transfer pump is designed for transferring fuel from storage tanks to vehicles and equipment. Its robust construction includes threaded ports, a mounting bracket, and a regulator for precise fuel delivery in diverse applications.

## ADDITIONAL IMAGES

## Overview

### High-Performance Fuel Transfer Solution

The EX-50 fuel transfer pump is engineered for reliable fluid management in both industrial and automotive environments. Featuring an explosion-proof permanent magnet motor and built-in thermal overload protection, this unit ensures safety and durability during operation. It is versatile and compatible with diesel, kerosene, and gasoline, making it an essential tool for efficient fuel transfer.

## Performance

### Key Performance Metrics

**50 LPM**

Max Flow Rate

**2700 RPM**

Motor Speed

**0.125 HP**

Motor Power

## Technical Specifications

Compatible Media	Diesel, Kerosene, Petrol/Gasoline
Inlet/Outlet Size	1 inch
Voltage	12v / 24v
Operating Temperature Range	-10°C to +40°C

## Features

### Safety & Construction

- Explosion-proof permanent magnet motor
- Thermal overload protection
- Robust construction for industrial durability
- Corrosion-resistant finish
