

Full Port Brass Ball Valve

This ball valve is constructed from brass and features a full port design. It is used for on/off control of fluids and gases with a quarter-turn handle.

Overview

Professional Grade Full Port Ball Valve

The B1004 full port brass ball valve is engineered for high-performance fluid and gas flow control in industrial and plumbing systems. Featuring a durable brass construction, this valve ensures reliable operation and resistance to corrosion in demanding environments. Its quarter-turn handle mechanism allows for rapid and precise on-off switching, making it an essential component for system maintenance and flow management.
