

Fuse Holder with Neutral Connection

This fuse holder is designed to house and protect fuses in electrical circuits. The neutral connection allows for complete circuit isolation when the fuse blows, enhancing safety.

Product Overview

Professional Circuit Protection

The RT18-N fuse holder with neutral connection provides a secure and reliable housing for industrial electrical circuits. It is specifically designed to protect systems against overcurrents and short circuits, ensuring operational safety. With an integrated neutral connection, it allows for complete circuit isolation during fuse replacement, making it an essential component for robust electrical maintenance.

Technical Specifications

Key Features

- Integrated neutral connection
- Simplified fuse replacement
- Overcurrent protection
- Short circuit protection
- Complete circuit isolation

Model	RT18-N
