

G2130 U.S. Type Bow Shackle

This U.S. Type Bow Shackle G2130 is suitable for heavy-duty lifting and rigging applications. It is made from high-strength alloy steel and features a hot-dip galvanized finish for enhanced corrosion resistance.

Product Overview

Professional Rigging Excellence

The G2130 U.S. Type Bow Shackle is an industry-standard solution engineered for rigorous heavy-duty lifting and marine rigging applications. Forged from premium high-strength alloy steel, these shackles provide exceptional load-bearing reliability in demanding industrial environments. Each unit is hot-dip galvanized to ensure superior corrosion resistance, significantly extending operational life in harsh outdoor or marine conditions.

Technical Specifications

Material Composition	High-strength alloy steel
Surface Finish	Hot-dip galvanized
Pin Security	Cotter pin

Certifications & Usage

Recommended Applications

- Industrial lifting
- Marine rigging
- Heavy construction

Compliance	U.S. Type, Safety Standard Compliant
