

G70K Railway Oil Tanker Car

This railway oil tanker is designed for the transportation of various liquid commodities, mainly petroleum products. The tanker car has a cylindrical tank mounted on a rail car chassis and is equipped with safety valves, filling ports, and thermal insulation.

Overview

G70K Railway Oil Tanker Car

The G70K Railway Oil Tanker is a specialized rail car engineered for the safe and efficient transport of liquid commodities, primarily petroleum products. It features a robust cylindrical tank mounted on a rail chassis, equipped with essential safety valves and discharge ports. Designed to meet strict railway industry standards, this tanker ensures secure handling of flammable and hazardous liquids during transit.

Technical Specifications

Safety Equipment

- Safety valves
- Secure filling ports
- Discharge ports
- Thermal insulation

Model Designation	G70K
Primary Application	Petroleum Transport, Hazardous Liquid Transport, Railway Logistics

Identification

Identification Markings

Identifier Type	Value
Model	G70K
Serial/Unit Number	6546
Fleet Number	6283052
