

Galvanized Steel Cross Wrench for Lug Nuts

This cross wrench is designed for tightening and loosening lug nuts on vehicle wheels. The tool is constructed from durable steel with a galvanized coating for corrosion resistance.

Product Overview

Heavy-Duty Galvanized Cross Wrench

This galvanized steel cross wrench is engineered for reliable performance in automotive maintenance and tire repair. Its robust cross-arm design provides the necessary leverage for tightening and loosening lug nuts with ease. Featuring a durable galvanized coating, the tool is built to resist corrosion and withstand demanding workshop environments.

Technical Specifications

Material & Finish	Galvanized Steel
Corrosion Resistance	Yes
Application Areas	Automotive Repair, Vehicle Maintenance, Tire Changes

Design Features

Key Benefits

- Enhanced leverage for high-torque applications
- Corrosion-resistant galvanized coating
- Versatile multi-socket design
- Durable steel construction

Wrench Configuration	4-Way Cross Design
