Galvanized Steel Grain Storage Silo

This galvanized steel grain silo provides a scientific storage method, ensuring grains are first in and first out. It requires less space than traditional storage and maintains grain quality through aeration.

Product Overview

High-Capacity Grain Storage Solution

This galvanized steel grain storage silo offers a robust and modular solution for agricultural needs, capable of storing diverse grains such as paddy, corn, soybean, and wheat. Engineered for high structural integrity, the silo features corrugated steel walls and is constructed using advanced manufacturing processes to ensure longevity and durability. With a capacity range of 5 to 15,000 cubic meters, this system is designed to provide efficient, safe, and scalable storage for professional agricultural operations.

Technical Specifications

Capacity Range

5 m3	15000 m3
Minimum Capacity	Maximum Capacity

Material & Coating	Galvanized Steel (Zinc layer: 275-600g/m2)
Installation Method	Bolted

Key Features

Design Advantages

- High capacity up to 18,000 tons per unit
- External stiffeners to minimize grain residue
- Modular design for easy interchangeability
- Standardized components for partial replacement

Suitable For	Grain, Paddy, Corn, Soybean, Wheat
