

Galvanized Steel Pipes for Construction

Galvanized steel pipes are suitable for diverse construction and engineering purposes. They provide a reliable solution for various building material applications.

Product Overview

Professional Grade Steel Piping Solutions

These ERW steel pipes are engineered for high-performance applications in construction, machinery, and infrastructure projects. Available in round, square, and rectangular profiles, they feature versatile surface treatments including hot-dipped galvanization and pre-painting to ensure durability. Designed for diverse transport and structural needs, these pipes can be processed according to specific technical drawings.

Technical Specifications

Surface Finish Options

- Black (Oiled)
- Hot Dipped Galvanization
- Pre-painted

Available Profiles

Round, Square, Rectangular

Application & Materials

Primary Applications

- Water Transportation
- Gas Transportation
- Line Transportation
- Construction
- Bridge Building
- Machinery Manufacturing

Material Availability

Carbon Steel • Stainless Steel • Copper

Compliance Standards

API 5L • ERW

Ordering Information

Custom Processing

Yes

Pricing Structure

Pricing is determined based on specific sizes, dimensions, and quantity requirements.
