

Galvanized Steel Stucco Netting

This galvanized stucco netting is constructed from 20-gauge steel wire, forming a hexagonal mesh pattern. It provides a strong mechanical key for stucco, ensuring a secure bond and preventing cracking in wall applications.

Product Overview

Professional Grade Stucco Foundation

This galvanized steel stucco netting is engineered to provide a robust mechanical key for stucco applications. By utilizing a durable 20-gauge steel construction in a precise hexagonal weave, it ensures excellent surface adhesion while effectively minimizing the risk of wall cracking. It serves as an essential reinforcement layer for professional construction projects requiring long-term structural integrity.

Technical Specifications

Wire Gauge	20 gauge
Mesh Pattern	Hexagonal
Opening Size	1 inch
Material Finish	Galvanized Steel

Logistics

Packaging Format	Roll
------------------	------

Key Features

Performance Benefits

- Secure stucco adhesion
- Resists cracking
- Durable steel construction
- Easy application to studs/sheathing
