Product Overview

DIN1480 Turnbuckle Overview

This DIN1480 turnbuckle is a high-strength rigging component designed for precise adjustment of tension and length in ropes, cables, and tie rods. Constructed from durable galvanized steel, it offers excellent corrosion resistance suitable for demanding marine, architectural, and industrial environments. The versatile design features a rotating frame that allows for easy tightening and loosening, ensuring optimal tensioning for diverse anchoring applications.

Technical Specifications

Surface Finish

Zinc Plated • Hot Dip Galvanized

Materials

Carbon Steel, Malleable Cast Iron

Production Process

Drop forged, casting

Configuration Options

End Configurations

- Hook & Hook
- Hook & Eye
- Eye & Eye
- Clevis & Clevis

Logistics & Customization

Packaging

Plastic bags and cartons on pallets

Customization

Yes
