

Galvanized Steel Wire Rope for Rigging

This high-strength steel wire rope is designed for rigging applications. It features a galvanized finish for corrosion resistance and long-lasting performance.

Overview

High-Performance Rigging Solution

This high-strength galvanized steel wire rope is engineered for demanding rigging, lifting, and hoisting applications. Its multi-strand construction ensures superior load-bearing capacity and structural durability under stress. The specialized galvanized finish provides robust corrosion resistance, ensuring long-lasting performance even in harsh environments.

Technical Specifications

Primary Applications

- Lifting
- Hoisting
- Securing heavy loads
- General rigging

Finish and Material	Galvanized Steel, Corrosion Resistant
Construction	Multi-strand twisted
