

Galvanized Steel Wire Rope Thimble

This galvanized steel wire rope thimble is designed to protect wire rope eyes from wear and deformation. It is suitable for creating strong and durable terminations in rigging and lifting applications.

Product Overview

Professional Rigging Hardware

This galvanized steel wire rope thimble is an essential component for creating secure and long-lasting eye terminations in rigging and lifting systems. Engineered from C 15 material, it is specifically designed to prevent wire rope from deforming or wearing at the load-bearing point. These thimbles conform to G411 standards, ensuring consistent performance in demanding industrial applications.

Technical Specifications

Standard
G411

Material
C 15 Steel

Finish
Galvanized

Application Details

Suitable Applications
Rigging, Lifting, Eye Protection, Cable Termination
