

# Garbage Bin Injection Molds

Injection molds are essential for producing plastic garbage bins of varying shapes, sizes, and designs. Each mold is precisely engineered to create specific features of the garbage bins, such as the body and lid.

## Product Overview

### High-Performance Injection Molds

These precision-engineered injection molds are designed for the efficient, high-volume production of daily-use garbage bins. Constructed from durable, high-grade steel, these molds are built to withstand the rigorous pressures and temperatures of industrial injection molding processes. They are capable of producing various bin components, including bodies, lids, and specialized attachments like wheels and pedals, ensuring versatility for both household and commercial product lines.

## Technical Specifications

### Available Mold Variants

- Dust Bin mould\_294
- Dust Bin mould\_295
- Dust Bin mould\_296
- Dust Bin mould\_297
- Dust Bin mould\_298
- Dust Bin mould\_299

### Component Capability

Bin Body • Lid • Foot Pedal • Wheels

### Construction Material

High-durability industrial steel

### Application Suitability

Household Waste Bins, Commercial Waste Bins, High-Volume Production
