

Garbage Bin Injection Mould

This injection mould is used for producing garbage bins. It is engineered for creating the shape and structure of plastic garbage bins.

Product Overview

Precision Injection Moulding Solution

This high-grade steel injection mould is engineered for the efficient, high-volume production of daily-use garbage bins. Designed with precision-machined cavities, cores, and integrated ejector mechanisms, it ensures consistent part quality and structural integrity. Built for durability in demanding manufacturing environments, this tool supports repeated cycles to meet industrial production requirements.

Technical Specifications

Key Components

- Cavities
- Cores
- Ejector mechanisms

Application

Plastic Injection Moulding • Daily Use Goods

Mould Material

High-grade steel

Production Metrics
