

# Garden Cultivating Tool Head

This durable garden tool features a robust metal construction designed for various gardening tasks. The tool head's shape ensures efficient soil penetration and manipulation; the handle socket is designed for secure attachment to a wooden or composite handle (handle not included).

## Product Overview

### Professional Grade Cultivating Tool Head

This durable garden cultivating tool head is engineered for high-performance soil management, including digging, weeding, and aeration. Its robust metal construction ensures longevity and efficient soil penetration for demanding landscaping tasks. Designed for versatility, the universal socket allows for secure attachment to various wooden or composite handles, making it an essential component for both professional landscapers and dedicated home gardeners.
