

# Garnet Sand for Waterjet Cutting

Garnet sand is an abrasive media specifically designed for waterjet cutting applications. It ensures efficient cutting performance on a variety of materials, providing clean edges.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Abrasive Media

This garnet sand is specifically formulated for industrial waterjet cutting applications, ensuring precise and efficient material processing. With a focus on consistent performance and minimal dust content, it is an ideal abrasive media for demanding industrial environments. The product is available in multiple grit sizes, including 60/80 and 120 mesh, to accommodate various cutting precision requirements.

## Technical Specifications

### Primary Applications

- Waterjet cutting
- Industrial cutting processes
- Precision material shaping

### Available Grit Sizes

60 mesh, 80 mesh, 120 mesh

## Logistics & Quality

### Quality Standards

SGS Certified • ISO Certified • CQC Certified

### Packaging

Durable bulk bags
