

Gas Boiler Centrifugal Blower Fan

Centrifugal blower fan used in gas boilers. It provides optimal airflow and quiet operation within heating systems.

Overview

High-Efficiency Gas Boiler Blower

This centrifugal blower fan motor is engineered specifically for gas boiler applications, ensuring reliable and consistent airflow for efficient combustion. Designed to operate across a wide voltage range, it offers versatility for various international heating systems. The unit features durable construction for a long service life and is optimized for quiet operation, making it an ideal component for residential and commercial heating equipment.

Technical Specifications

Operating Parameters

100 VAC

Min Voltage

240 VAC

Max Voltage

50 Hz

Frequency

Application Suitability

Gas boiler combustion systems

Compliance & Quality

Safety Certifications

CE • UL • VDE • 3C

Management Systems

- ISO 9001 Quality Management
- ISO 14001 Environmental Management

Environmental Standards

RoHS, REACH
