Product Overview

Efficiency in Nut Processing

The Gas Heating Cashew Nut Peeling Machine utilizes an advanced air peeling method designed for the efficient processing of cashews, peanuts, and other nuts. This unit integrates drying and peeling into a single operation, ensuring high production efficiency while maintaining the integrity of the nut surface. Equipped with automatic temperature control and an automated feeding system, it is an ideal solution for small-scale nut processing facilities seeking reliable, clean, and low-maintenance operation.

Technical Capabilities

The gas heating system and automated feeding mechanism ensure consistent peeling performance.

Peeling Technology	Air peeling (Gas heating)
Automation Features	Automatic temperature control, Automatic feeding, Automatic skin separation
Suitable Materials	Cashews, Peanuts, Various nuts

Performance & Maintenance

Key Operational Benefits

- Damage-free food surface
- Drying and peeling in one step
- High production efficiency
- Easy maintenance and cleaning
- Low failure rate

After-Sales Support

Service & Coverage

The manufacturer provides free replacement parts for defects caused by design issues within the warranty period. Technical support is available for all users, including guidance for issues resulting from operational factors.

Warranty Terms

1-year standard guarantee with lifelong maintenance support.
