

# Gas Line Y-Connector

This Y-connector is designed for high-pressure oxygen and acetylene gas lines. It allows splitting a single gas source into two separate lines with controlled flow.

## Product Overview

### Professional Gas Line Y-Connector

This high-pressure Y-connector is engineered for demanding welding and cutting applications requiring precise gas management. Designed for both oxygen and acetylene lines, it allows a single source to be split into two separate supply lines for increased operational efficiency. The unit is built from durable metal and features intuitive color-coded controls to ensure safety and accuracy in industrial environments.

## Technical Specifications

### Control Identification

Gas Type	Knob Color	Marking
Oxygen	Black	OXY
Acetylene	Red	None

Material	Durable metal
Compatible Gases	Oxygen, Acetylene

## Performance

### Primary Applications

- Welding
- Cutting

Flow Control	Precision integrated valves
