

Gas Regulator and Flowmeter Set

Gas regulator and flowmeter sets are designed to control and measure gas flow in various industrial applications. These devices feature pressure gauges for monitoring and adjustable knobs for precise control.

Product Overview

Industrial Gas Regulation and Flow Control

This range of gas regulators and flowmeters is engineered for precise pressure management and flow measurement in demanding industrial environments. These devices support various gases, including oxygen, acetylene, and propane, ensuring safe and accurate delivery for welding, cutting, and other applications. Each unit is constructed with durable, high-quality materials and features easy-to-read pressure gauges for real-time monitoring and control.

Technical Specifications

Key Features

- Integrated pressure gauges for inlet and outlet monitoring
- Adjustable knobs for precise flow regulation
- Durable heavy-duty construction
- Versatile connection options for industrial systems

Compatible Gases

Oxygen, Acetylene, Propane

Performance Data

Operational Metrics

14 Mpa

Max Inlet Pressure

40 Mpa

Max Outlet Pressure
