

Gas Safety Valve Assembly

This valve assembly is designed for use in gas appliances such as ovens, stoves, and water heaters. It features a thermocouple that shuts off the gas supply if the flame is extinguished, ensuring safety.

Product Overview

Gas Safety Valve Assembly

This gas safety valve assembly is engineered for precise gas flow control in appliances such as ovens, stoves, and water heaters. It features an integrated thermocouple for reliable flame sensing, ensuring the gas supply is automatically shut off if the flame is extinguished. Constructed from durable, corrosion-resistant alloy, this assembly provides long-lasting performance and essential safety for commercial and residential heating applications.

Technical Specifications

Compatible Appliances

- Ovens
- Stoves
- Water Heaters

Included Components

- Control Knob
- Thermocouple
- Capillary Tube
- Gas Line Connections

Material Composition

Brass or corrosion-resistant alloy

Safety Features

Flame Sensing, Automatic Shut-off, Thermocouple Integrated
