

# Gasoline Engine

Single cylinder, 4-stroke, air-cooled gasoline engine with overhead valve (OHV) design provides efficient power and reliable performance. It is ideal for powering various applications such as water pumps, generators, and agricultural equipment.

## Overview

### Reliable Power Solution

This single-cylinder, 4-stroke, air-cooled gasoline engine features an overhead valve (OHV) design to ensure efficient power delivery and reliable performance. Equipped with a recoil starting system and transistorized magneto ignition (T.M.I), it is built for consistent operation. Its robust design makes it an ideal choice for powering water pumps, generators, and a wide range of agricultural equipment.

## Performance Metrics

### Rated Power

**5.5 HP**

Power

## Technical Specifications

Engine Type	Single cylinder, 4-stroke, air-cooled
Valve Design	Overhead Valve (OHV)
Ignition System	Transistorized Magneto Ignition (T.M.I)
Starting Method	Recoil Start

## Applications

Typical Applications	Water Pumps, Generators, Agricultural Equipment, Packaging Machinery
