

Gasoline Engine Air Compressor for Pneumatic Tools

This gasoline engine air compressor provides a portable solution for pneumatic applications. It delivers high air pressure and flow rate for powering tools and inflating tires.

Overview

Professional Gasoline Air Compressor

This gasoline engine air compressor is a robust and portable solution designed for pneumatic applications in remote locations where electricity is unavailable. It features a twin-piston pump design for reliable performance and is built with a durable metal frame for easy transport. With its CE-compliant tank and specialized paint treatment, this unit is engineered for longevity and consistent industrial-grade output.

Technical Specifications

Pump Design	Twin piston
Compliance Standards	CE Certified

Design & Portability

Wheel Configuration	1 x 8 inch air inflating wheels
Frame Construction	Metal U-shape handle
Surface Treatment	Special paint treatment
