

Gasoline Engine EM200L-C

The EM200L-C is a robust gasoline engine designed for various power generation applications. It is engineered for reliable performance and is suitable for generators and water pumps.

ADDITIONAL IMAGES

Overview

Robust Gasoline Engine

The EM200L-C is a versatile gasoline engine engineered for reliable power generation across various applications. Designed with a durable metallic alloy block for efficient heat dissipation, this unit is well-suited for powering generators, water pumps, and other portable equipment. It features a user-friendly interface and high-capacity fuel tank, ensuring straightforward operation and extended run times for both residential and commercial tasks.

Technical Specifications

Power Output

6.5 HP

Horsepower

Model Identifier

EM200L-C

Design Features

Manual Start, Integrated Control Panel, Metallic Alloy Block

Applications

Compatible Equipment

- Power Generators
- Water Pumps
- Portable Power Equipment
