

Gasoline Engine Portable Air Compressor

This portable air compressor is powered by a gasoline engine. It is designed for mobility with wheels and a handle, making it suitable for various pneumatic applications.

Product Overview

High-Performance Gasoline Portable Air Compressor

This portable air compressor is engineered for reliability and mobility in demanding work environments. Powered by a robust gasoline engine, it provides the pneumatic power necessary for diverse on-site applications without the need for an electrical grid. Its design includes a protective cage and integrated wheels, ensuring durability and ease of transport for professional use.

Technical Specifications

Engine Power

5.5 HP

Horsepower

Engine Model

168F

Design & Build

Protection

Protective Cage • Robust Tank

Mobility Features

Wheeled, Handle, Portable
