

# Gasoline Engine Water Pump

This gasoline engine water pump is designed for drainage and irrigation applications. It delivers reliable performance and efficient water transfer.

## ADDITIONAL IMAGES

## Product Overview

### Versatile Water Management Solution

The FST-25DW is a compact and portable water pump engineered for high-performance irrigation and drainage applications. Featuring a robust four-stroke gasoline engine, it delivers consistent power and reliable flow for agricultural, construction, and domestic use. Designed with a durable protective frame and intuitive controls, this unit ensures stable operation and easy portability in diverse environments.

## Technical Specifications

### Performance Metrics

**7000 r/min**  
Rated Speed

**0.75 kW**  
Power Output

### Engine Type

139F Four-stroke Gasoline Engine

## Operational Guidelines

### Critical Operational Warnings

- Do not run the pump dry
- Ensure stable placement before operation
- Check engine oil before starting

## Applications

### Primary Applications

Agricultural Irrigation, Drainage, Construction Site Dewatering, Domestic Water Transfer, Emergency Water Removal
