

Gasoline Engine Water Pump

This water pump is designed for various water transfer applications. It is powered by a gasoline engine, providing efficient and portable operation for high-volume water displacement.

Overview

Professional Water Transfer Solution

The BS100ZB30-5.8Q is a robust, gasoline-powered water pump designed for high-volume water displacement. Its durable protective frame ensures reliability in demanding environments such as irrigation, construction, and emergency water removal. This portable unit offers efficient operation for a variety of professional water transfer applications.

Technical Performance

Engine Power Rating

5.8 HP

Engine Output

Model Number

BS100ZB30-5.8Q

Design Features

Design Highlights

Protective Roll Frame, Portable Design, Gasoline Powered, High-Volume Displacement

Applications

Recommended Uses

- Agricultural Irrigation
- Construction Site Dewatering
- Emergency Water Removal
