

Gasoline Engine Water Pump

This centrifugal water pump is designed for water transfer applications. It is powered by a gasoline engine and features a durable frame for protection and portability.

Product Overview

High-Performance Gasoline Water Pump

The TDP40C is a robust and reliable centrifugal water pump designed for high-volume water displacement across various professional applications. Featuring a durable protective frame for enhanced portability and longevity, this unit is engineered for efficiency in irrigation, construction sites, and emergency water removal tasks. It offers a balanced combination of reliable gasoline-powered performance and user-friendly operation for demanding environments.

Key Metrics

Performance Highlights

40 mm

Pump Series

Core Features

Primary Advantages

- Durable protective frame
- High-volume centrifugal displacement
- Portable design
- Gasoline-powered engine

Applications

Common Use Cases

Irrigation, Construction, Emergency Water Removal
