

Gasoline Engine Water Pump

This water pump is powered by a gasoline engine, providing high performance and portability. It is suitable for irrigation, construction, and emergency water removal.

Product Overview

Professional Performance Overview

The ALL-50 gasoline engine water pump is a robust solution engineered for high-performance water transfer. Built with a durable protective frame, this unit is designed to withstand demanding environments while maintaining portability. It serves as an essential tool for agricultural irrigation, construction site management, and emergency water removal tasks.

Technical Specifications

Engine Type	Gasoline
Model Identifier	ALL-50

Construction & Materials

Materials Used	Metal, Plastic
Frame Type	Yes

Application

Primary Applications

- Irrigation
- Construction
- Emergency water removal
