

# Gasoline Engine Water Pump for Agriculture

This portable water pump is designed for agricultural applications such as irrigation and drainage. It features a gasoline-powered engine coupled with a centrifugal pump, encased in a protective roll cage for durability and transport.

## Product Overview

### High-Efficiency Agricultural Water Pump

This portable gasoline-powered water pump is engineered specifically for demanding agricultural environments. Featuring a robust OHV engine coupled with a high-performance centrifugal pump, it provides reliable power for irrigation, drainage, and general water transfer tasks. The unit is protected by a durable roll cage, ensuring longevity and ease of transport across varied field conditions.

## Technical Specifications

Engine Type	OHV (Overhead Valve) Gasoline Engine
Pump Type	Centrifugal

## Design & Build

Portability	Portable • Field-Ready
Frame Construction	Protective Roll Cage

## Applications

### Typical Applications

- Agricultural Irrigation
- Water Drainage
- General Water Transfer
